YAM 2.9p1 (XXth April 2014)

Changes

Here is a brief list of the most important changes since the 2.9 release in December 2013:

Milestone: YAM 2.9p1 (27 matches)

Ticket	Release Notes
484	xed a thread safety issue which resulted in GUI operations being xecuted not from the main YAM thread but from a different thread. This aused MUI to popup a warning under certain circumstances when ownloading mails.
496	witched the whole catalog translation mechanism from manually ubmitting translated .ct files to the use of the free services of ansifex.com. Now translators can freely use the services of transifex.com nd submit translations online via ttps://www.transifex.com/projects/p/yam/.
498	lightly changed the logical of the mail reply action in terms of mailing lists. AM will now directly reply to the Mail-Followup-To header entry if a atching mailing list is found. In addition, the SHIFT key will now make ure that a reply will always end up at the sender of a mail. Contrary to at, pressing the ALT key will directly reply to all (e.g. the mailing list).
502	xed the folder conversion routines to not loose connection to the estination folder in case of a move-to-folder operation.
483	xed a problem where the installer script failed on AmigaOS3 with Jnmatched parenthesis in line 885"
488	xed a minor cosmetic bug where the wrong config page titles were isplayed.
489	xed the signature text editor to not parse the signature text via the arseEmailText() function as otherwise the text styles end up in mixing up specified signature.
503	xed the incorrect conversion of filters from older YAM versions when sing an AND combination of rules.
507	xed a problem with the "Content-Disposition:" MIME header line which as set to 'inline' for plain text attachments. This cause problems with ome mail clients (e.g. Apple Mail) which always displayed these ttachments as part of the mail text not allowing to save them as separate ttachments.
508	xed a bug where quoted real names in an email address string was correctly added to YAMs emailcache mechanism.
515	xed a bug where upon creating a new addressbook group new entries ouldn't be inserted into that group until a reload of the addressbook had een performed.
519	xed a bug which prevented the user images in the address book and mail formation part of the read window from working on MorphOS.
520	xed a bug where the display name of standard mail folders (e.g. coming) couldn't be changed.
521	xed a minor bug regarding the transparency settings of the donate image the About window of YAM.
528	ails put on "hold" by older versions of YAM without a dedicated Drafts older will now be moved from the Outgoing folder to the Drafts folder upon tartup to avoid being sent out by accident.
533	xed a bug where a setting the disabled state of filter rules always cause to et complete disabled state of the whole filter.
536	xed a minor bug in the MAILCHECK Arexx command where the STEM ariables weren't correctly initialized.
22	xed a long standing bug where a Drag&Drop operation from a mail to the ddress book didn't actually add the address to the drop position.
495	odified the Cc and BCC text fields to be actually localizable by anslators.
510	ixed a bug where the small attachment list in the first tab of the write indow wasn't updated if attachments were added in the 'attachments' tab.
543	ownloading an update archive will now always show the transfer window inform the user about the download's progress no matter what if the ansfer window is configured to be invisible for mail transfers.
434	e online ARexx documentation (http://doc.yam.ch/) can now be directly ccessed via the corresponding main menu item.
491	eworked the Installer script to check for a running instance of YAM. If that the case then the user is prompted to terminate that instance to make ure that no files which might get overwritten during the installation are cked. After the installation a reboot is recommended to ensure that pdated libraries and classes are really flushed from memory.
493	xed a rare crash bug where YAM crashed in DateStamp2String() due to a issing NULL pointer check.
497	dded the missing folder icons to the supplied AISS theme which was omplaining about these missing icons.
500	or empty IN pattern files the edit button will be disabled now. Only the opup button will be enabled to let the user select an existing pattern file.
509	xed a bug in the mail parsing routines where it could have happened that AM was parsing over the boundaries of a readable MIME part if the text ontained many UTF8 convertable characters.

Changes sorted by Type

Type: bug (23 matches)

Ticket	Release Notes
#484	fixed a thread safety issue which resulted in GUI operations being executed not from the main YAM thread but from a different thread. This caused MUI to popup a warning under certain circumstances when downloading mails.
#502	fixed the folder conversion routines to not loose connection to the destination folder in case of a move-to-folder operation.
#483	fixed a problem where the installer script failed on AmigaOS3 with "Unmatched parenthesis in line 885"
#488	fixed a minor cosmetic bug where the wrong config page titles were displayed.
#489	fixed the signature text editor to not parse the signature text via the ParseEmailText() function as otherwise the text styles end up in mixing up a specified signature.
#503	fixed the incorrect conversion of filters from older YAM versions when using an AND combination of rules.
#507	fixed a problem with the "Content-Disposition:" MIME header line which was set to 'inline' for plain text attachments. This cause problems with some mail clients (e.g. Apple Mail) which always displayed these attachments as part of the mail text not allowing to save them as separate attachments.
#508	fixed a bug where quoted real names in an email address string was incorrectly added to YAMs emailcache mechanism.
#515	fixed a bug where upon creating a new addressbook group new entries couldn't be inserted into that group until a reload of the addressbook had been performed.
#519	fixed a bug which prevented the user images in the address book and mail information part of the read window from working on MorphOS.
#520	fixed a bug where the display name of standard mail folders (e.g. incoming) couldn't be changed.
#521	fixed a minor bug regarding the transparency settings of the donate image in the About window of YAM.
#528	Mails put on "hold" by older versions of YAM without a dedicated Drafts folder will now be moved from the Outgoing folder to the Drafts folder upon startup to avoid being sent out by accident.
#533	fixed a bug where a setting the disabled state of filter rules always cause to set complete disabled state of the whole filter.
#536	fixed a minor bug in the MAILCHECK Arexx command where the STEM variables weren't correctly initialized.
#22	fixed a long standing bug where a Drag&Drop operation from a mail to the address book didn't actually add the address to the drop position.
#495	modified the Cc and BCC text fields to be actually localizable by translators.
#510	Fixed a bug where the small attachment list in the first tab of the write window wasn't updated if attachments were added in the 'attachments' tab.
#491	reworked the Installer script to check for a running instance of YAM. If that is the case then the user is prompted to terminate that instance to make sure that no files which might get overwritten during the installation are locked. After the installation a reboot is recommended to ensure that updated libraries and classes are really flushed from memory.
#493	fixed a rare crash bug where YAM crashed in DateStamp2String() due to a missing NULL pointer check.
#497	added the missing folder icons to the supplied AISS theme which was complaining about these missing icons.
#500	For empty IN pattern files the edit button will be disabled now. Only the popup button will be enabled to let the user select an existing pattern file.
#509	fixed a bug in the mail parsing routines where it could have happened that YAM was parsing over the boundaries of a readable MIME part if the text contained many UTF8 convertable characters.

Type: enhancement (3 matches)

Ticket	Release Notes
#498	Slightly changed the logical of the mail reply action in terms of mailing lists. YAM will now directly reply to the Mail-Followup-To header entry if a matching mailing list is found. In addition, the SHIFT key will now make sure that a reply will always end up at the sender of a mail. Contrary to that, pressing the ALT key will directly reply to all (e.g. the mailing list).
#543	Downloading an update archive will now always show the transfer window to inform the user about the download's progress no matter what if the transfer window is configured to be invisible for mail transfers.
#434	the online ARexx documentation (http://doc.yam.ch/) can now be directly accessed via the corresponding main menu item.

Type: task (1 match)

Ticket	Release Notes
#496	switched the whole catalog translation mechanism from manually submitting translated .ct files to the use of the free services of transifex.com. Now translators can freely use the services of transifex.com and submit translations online via https://www.transifex.com/projects/p/yam/.

Changes sorted by Components

Component: ARexx interface (1 match)

Ticket	Release Notes
#536	fixed a minor bug in the MAILCHECK Arexx command where the STEM variables weren't correctly initialized.

Component: MIME handling (1 match)

Ticket	Release Notes
#507	fixed a problem with the "Content-Disposition:" MIME header line which was set to 'inline' for plain text attachments. This cause problems with some mail clients (e.g. Apple Mail) which always displayed these attachments as part of the mail text not allowing to save them as separate attachments.

Component: addressbook (3 matches)

Ticket	Release Notes
#508	fixed a bug where quoted real names in an email address string was incorrectly added to YAMs emailcache mechanism.
#515	fixed a bug where upon creating a new addressbook group new entries couldn't be inserted into that group until a reload of the addressbook had been performed.
#22	fixed a long standing bug where a Drag&Drop operation from a mail to the address book didn't actually add the address to the drop position.

Component: charset handling (1 match)

Ticket	Release Notes
#509	fixed a bug in the mail parsing routines where it could have happened that YAM was parsing over the boundaries of a readable MIME part if the text contained many UTF8 convertable characters.

Component: configuration (2 matches)

Ticket	Release Notes
#502	fixed the folder conversion routines to not loose connection to the destination folder in case of a move-to-folder operation.
#489	fixed the signature text editor to not parse the signature text via the ParseEmailText() function as otherwise the text styles end up in mixing up a specified signature.

Component: installation (2 matches)

Ticket	Release Notes
#483	fixed a problem where the installer script failed on AmigaOS3 with "Unmatched parenthesis in line 885"
#491	reworked the Installer script to check for a running instance of YAM. If that is the case then the user is prompted to terminate that instance to make sure that no files which might get overwritten during the installation are locked. After the installation a reboot is recommended to ensure that updated libraries and classes are really flushed from memory.

Component: mail filtering (1 match)

Ticket	Release Notes
#503	fixed the incorrect conversion of filters from older YAM versions when using an AND combination of rules.

Component: mail indexing (1 match)

Ticket	Release Notes
#528	Mails put on "hold" by older versions of YAM without a dedicated Drafts folder will now be moved from the Outgoing folder to the Drafts folder upon startup to avoid being sent out by accident.

Component: translation (2 matches)

Ticket	Release Notes
#496	switched the whole catalog translation mechanism from manually submitting translated .ct files to the use of the free services of transifex.com. Now translators can freely use the services of transifex.com and submit translations online via https://www.transifex.com/projects/p/yam/.
#495	modified the Cc and BCC text fields to be actually localizable by translators.

Component: user interface (13 matches)

Ticket	Release Notes
#484	fixed a thread safety issue which resulted in GUI operations being executed not from the main YAM thread but from a different thread. This caused MUI to popup a warning under certain circumstances when downloading mails.
#498	Slightly changed the logical of the mail reply action in terms of mailing lists. YAM will now directly reply to the Mail-Followup-To header entry if a matching mailing list is found. In addition, the SHIFT key will now make sure that a reply will always end up at the sender of a mail. Contrary to that, pressing the ALT key will directly reply to all (e.g. the mailing list).
