**ADDRINFO****NAME**

AddrInfo -- Return information about an address book entry. (V2.0)

**TEMPLATE**

VAR/K,STEM/K,ALIAS/A

**FUNCTION**

Returns information about an address book entry.

**INPUTS**

VAR/K - variable to store the results of the query

STEM/K - base name used for the stems where the returned data will be stored

ALIAS/A - alias of the entry to return info about

**RETURNS**

<STEM>TYPE - type of entry, may be one of P (person), L (distribution list) or G (group)

<STEM>NAME - real name of this entry

<STEM>EMAIL - email address of this entry

<STEM>PGP - PGP key ID of this entry

<STEM>HOMEPAGE - homepage of this entry

<STEM>STREET - street address of this entry

<STEM>CITY - city for this entry

<STEM>COUNTRY - country for this entry

<STEM>PHONE - phone # of this entry

<STEM>COMMENT - comment stored with this entry

<STEM>BIRTHDATE - date of birth of this entry, in (D)DMMYYYY format

<STEM>IMAGE - filename with the portrait picture of this entry

<STEM>MEMBERS.COUNT - number of members, if the entry is actually a distribution list

<STEM>MEMBERS.NR - the nth member if the entry is actually a distribution list, NR being a number between 0 and n-1

RC is set to 10 if the supplied alias does not exist or none was provided.

**NOTES**

Fields where information is not available are returned as an empty string, except for the birth date which is returned as a literal zero (0).

**EXAMPLE**

```
/* Enable result codes */
OPTIONS RESULTS

/* Ignore possible error from ADDRINFO */
OPTIONS FAILAT 11

/* Find a given entry */
ADDRINFO 'mars' STEM st.

/* Only continue if RC == 0 */
IF RC ~= 0 THEN EXIT

/* List results */
SAY 'Type of entry: 'st.type
