MAILBOUNCE

NAME

MailBounce — Open a new Write window to bounce the current message. (V2.0)

TEMPLATE

VAR/K,STEM/K,QUIET/S

FUNCTION

Opens a cut-down Write window to bounce the current message to another recipient.

INPUTS

VAR/K - alternative variable to store the number of the created window instead of RESULT

STEM/K - base name used for the stem where the returned data will be stored

QUIET/S - force the window to stay invisible (V2.1)

RETURNS

<STEM>WINDOW - number of the created window if the command had success; may be 0 or 1 (or 2, if QUIET is enabled)

RC is set to 10 if the window cannot be opened, maybe because the limit of two Write windows has been reached.

NOTES

In the outgoing message, only the "To:" field can be edited.
