**MAILBOUNCE****NAME**

MailBounce -- Open a new Write window to bounce the current message. (V2.0)

**TEMPLATE**

VAR/K,STEM/K,QUIET/S

**FUNCTION**

Opens a cut-down Write window to bounce the current message to another recipient.

**INPUTS**

VAR/K - alternative variable to store the number of the created window instead of RESULT

STEM/K - base name used for the stem where the returned data will be stored

QUIET/S - force the window to stay invisible (V2.1)

**RETURNS**

<STEM>WINDOW - number of the created window if the command had success; may be 0 or 1 (or 2, if QUIET is enabled)

RC is set to 10 if the window cannot be opened, maybe because the limit of two Write windows has been reached.

**NOTES**

In the outgoing message, only the "To:" field can be edited.

**EXAMPLE**

```
/* Silently bounce the current message */
MAILBOUNCE QUIET
WRITETO 'joe@example.com' 'mars'
WRITESEND
```
