MAILEXPORT

NAME

MailExport — Export the selected messages to a file. (V2.0)

TEMPLATE

FILENAME/A,ALL/S,APPEND/S,QUIET/S

FUNCTION

Exports the selected messages to a file, in a format ready to be used by any mail application which supports the MBOX format.

INPUTS

FILENAME/A - filename to use
ALL/S - export the whole folder
APPEND/S - append the data to an (already existing) file
QUIET/S - don't open the transfer window and export all mails silently

RETURNS

RC is set to 10 if no message is selected or if the output file can't be written to.

NOTES

EXAMPLE

```
/* Export all the contents of the current folder */
```

```
MAILEXPORT 'ram:spool' ALL
```
