

MAILIMPORT

NAME

MailImport -- Import messages from a file on disk into the current folder. (V1.3.2)

TEMPLATE

FILENAME/A,QUIET/S,WAIT/S

FUNCTION

Imports messages from a file on disk into the current folder. The file is assumed to be in MBOX format.

INPUTS

FILENAME/A - file to import messages from

QUIET/S - don't open the transfer window and import all mails silently

WAIT/S - open the transfer window to enable user interaction, i.e. message preselection (V2.0)

RETURNS

RC is set to 10 if the filename cannot be opened.

NOTES

The command returns immediately if the WAIT switch is used.

EXAMPLE

```
/* Selectively import messages to the Incoming folder */
```

```
SETFOLDER Incoming
```

```
MAILIMPORT 'ram:spool' WAIT
```
