

Error: Macro TranslatedPages(None) failed

expected string or buffer

MAILSENDALL

NAME

MailSendAll -- Send all the messages in the "Outgoing" folder.

TEMPLATE

FUNCTION

Sends all the messages in the "Outgoing" folder.

Messages marked as "Hold" are not affected by the command.

INPUTS

RETURNS

In V1.x, RC was always set to 0. As of V2.0 however, RC is set to 5 if the TCP/IP stack is not online or if there isn't any message ready to be sent.

Likewise, in V1.x RESULT was set to the number of sent emails, or -1 if the connection to the mail server failed. RESULT is never initialized in V2.0+.

NOTES

EXAMPLE

BUGS

No warning was returned in case of a problem to send. This was fixed in V2.0.
