**MAILSENDALL**

**NAME**

MailSendAll -- Send all the messages in the "Outgoing" folder.

**TEMPLATE**

**FUNCTION**

Sends all the messages in the "Outgoing" folder.

Messages marked as "Hold" are not affected by the command.

**INPUTS**

**RETURNS**

In V1.x, RC was always set to 0. As of V2.0 however, RC is set to 5 if the TCP/IP stack is not online or if there isn't any message ready to be sent.

Likewise, in V1.x RESULT was set to the number of sent emails, or -1 if the connection to the mail server failed. RESULT is never initialized in V2.0+.

**NOTES**

**EXAMPLE**

**BUGS**

No warning was returned in case of a problem to send. This was fixed in V2.0.
