

MAILSTATUS

NAME

MailStatus -- Change the status of the selected messages. (V2.0)

TEMPLATE

STATUS/A

FUNCTION

Changes the status of the selected messages.

Only the basic "read", "unread", "on hold" and "ready to send" status can be changed with the command; additional flags like "marked", "important", etc. remain untouched.

INPUTS

STATUS/A - may be one of

- H - on hold
- N - new and unread
- O - old and read
- Q - queued for sending
- R - the same as O
- U - old unread
- W - the same as Q

RETURNS

RC is set to 5 if no valid STATUS is supplied, or to 10 if it is not supplied at all.

NOTES

The command won't mind the type of folder, i.e. it will change the status of a message in the Incoming folder to "Ready to send" if instructed to do so.

EXAMPLE

```
/* Switch all selected messages to "Unread" */
```

```
MAILSTATUS U
```
