

## **Error: Macro TranslatedPages(None) failed**

expected string or buffer

# **READCLOSE**

## **NAME**

ReadClose -- Close the active Read window. (V2.0)

## **TEMPLATE**

## **FUNCTION**

Closes the active Read window as set by MAILREAD ?.

## **INPUTS**

## **RETURNS**

RC is set to 10 if no Read window was previously specified as "active" with MAILREAD ?.

## **NOTES**

## **EXAMPLE**

## **BUGS**

The command used to blindly act upon the first Read window opened at any given time; this was changed in V2.4 to require the use of MAILREAD ? to explicitly mark a window as "active".
