READCLOSE	2

READCLOSE

NAME

ReadClose -- Close the active Read window. (V2.0)

TEMPLATE

FUNCTION

Closes the active Read window as set by [MAILREAD](#).

INPUTS

RETURNS

RC is set to 10 if no Read window was previously specified as "active" with [MAILREAD](#).

NOTES

EXAMPLE

BUGS

The command used to blindly act upon the first Read window opened at any given time; this was changed in V2.4 to require the use of [MAILREAD](#) to explicitly mark a window as "active".
