

SETMAIL

NAME

SetMail -- Set the current message in the current folder by its position in the list.

TEMPLATE

NUM/N/A,MSGID/K

FUNCTION

Sets the current message in the current folder by its position in the list. The message list is redrawn if necessary to make the new current message visible, and all previously selected messages get deselected.

INPUTS

NUM/N/A - position occupied by the message in the list, may be a number between 0 and n-1
MSGID/K - MessageID of the message (V2.8)

RETURNS

RC is set to 10 if the specified message doesn't exist.

NOTES

SETMAIL sets the current message, but doesn't *select* messages by itself; use [LISTSELECT ?](#) for that.

EXAMPLE

```
/* Make the third message in the list the current message */
```

```
SETMAIL 2
```
