**SETMAILFILE**

**NAME**

SetMailFile -- Set the current message in the current folder by filename. (V2.0)

**TEMPLATE**

MAILFILE/A

**FUNCTION**

Sets the current message in the current folder by filename.

**INPUTS**

MAILFILE/A - filename where the message is stored

**RETURNS**

RC is set to 5 if the supplied filename can't be found.

**NOTES**

Path names are stripped. For instance, if "09193.017" exists in the current folder and a bogus "foobar:bogus/09193.017" filename is supplied, the file will still be found.
