

Welcome to the YAM Support Site

News

- 21.02.2010 - YAM 2.6 released... ??
- 26.12.2009 - Discussion forum updated. See <http://forum.yam.ch/> for more information.
- 23.12.2007 - YAM 2.5 released... ??

What is YAM?

YAM (short for **Yet Another Mailer**) is a MIME-compliant Internet mailer written for AmigaOS-based computers. It supports multi-POP3, APOP, SMTP, TLSv1/SSLv3, multiple users, PGP, unlimited hierarchical folders, filters, a configurable GUI (based on MUI) and an ARexx interface and many other features which are common for Mail User Agents (MUA) today... ??

Features

As the development of YAM goes back to 1995 it is probably one of the most feature-rich applications on the Amiga platform. Especially the MUI-based user interface allowed to implement functionality which are commonly used in graphical mail user client on other platforms today. Furthermore, the support and compliance to the most recent [RFC s](#) is one of the keystrength of YAM... ???
