## Welcome to the YAM Support Site

### News

- 21.02.2010 - YAM 2.6 released... ??
- 26.12.2009 - Discussion forum updated. See <http://forum.yam.ch> for more information.
- 23.12.2007 - YAM 2.5 released... ??

### What is YAM?

YAM (short for **Yet Another Mailer**) is a MIME-compliant open-source Internet mailer written for AmigaOS-based computer systems. It supports multi-POP3, APOP, SMTP, TLSv1/SSLv3, multiple users, PGP, unlimited hierarchical folders, filters, a configurable GUI (based on [?MUJ](#)) and an ARexx interface and many other features which are common for Mail User Agents ([?MUA](#)) today... ??

### Features

As the development of YAM goes back to 1995 it is probably one of the most feature-rich applications on the Amiga platform. Especially the MUI-based user interface allowed to implement functionality which are commonly used in graphical mail user client on other platforms today. Furthermore, the support and compliance to the most recent [?RFCs](#) is one of the keystrength of YAM... ???

### Testimonials

- "Best Email Client Ever" - Jools Smyth/Norway, Aug 2005
- "I switched to YAM 2.4p1 two weeks ago, after using UMS/PINT for more than 10 years, and first I have to say: Great work! An excellent email client" - Frank Wille/Germany, Jun 2005
- ... ???

### License

YAM is licensed under the [?GNU General Public License](#) (GPL). Basically this means: You can take that code, use it, and improve/modify it for free, but if you want to distribute your improvements, the same restriction applies: your version must also be GPLed and you have to release it to the public.
