Welcome to the YAM Support Site

News

- 21.02.2010 - YAM 2.6 released... [??](??)
- 26.12.2009 - Discussion forum updated. See ?http://forum.yam.ch/ for more information.
- 23.12.2007 - YAM 2.5 released... [??](??)

What is YAM?

YAM (short for **Yet Another Mailer**) is a MIME-compliant open-source Internet mailer written for AmigaOS-based computer systems. It supports multi-POP3, APOP, SMTP, TLSv1/SSLv3, multiple users, PGP, unlimited hierarchical folders, filters, a configurable GUI (based on [?MUI](?MUI)) and an ARexx interface and many other features which are common for Mail User Agents ([?MUA](?MUA)) today... [??](??)

Features

As the development of YAM goes back to 1995 it is probably one of the most feature-rich applications on the Amiga platform. Especially the MUI-based user interface allowed to implement functionality which are commonly used in graphical mail user client on other platforms today. Furthermore, the support and compliance to the most recent ?RFCs is one of the keystrength of YAM... [???](???)

Testimonials

- "*Best Email Client Ever''*" - Jools Smyth/Norway
- "*I switched to YAM 2.4p1 two weeks ago, after using UMS/PINT for more than 10 years, and first I have to say: Great work! An excellent email client''*" - Frank Wille/Germany

Getting YAM
