## Welcome to the YAM Support Site

### News

- 21.02.2010 - YAM 2.6 released.
- 26.12.2009 - Discussion forum update.
- 23.12.2007 - YAM 2.5 released.

### What is YAM?

YAM (short for **Yet Another Mailer**) is a MIME-compliant Internet mailer written for AmigaOS-based computers. It supports multi-POP3, APOP, SMTP, TLSv1/SSLv3, multiple users, PGP, unlimited hierarchical folders, filters, a configurable GUI (based on MUI) and an ARexx interface and many other features which are common for Mail User Agents (MUA) today.
